

Plan Review

JM Sites • August 5, 2026

Summary

JM Sites presents a highly focused and articulate business plan. The strategy targets a specific, lucrative niche: professional service firms suffering from a digital credibility gap. The transition from high-ticket service projects to a scalable SaaS product (SiteSignal) shows excellent long-term vision.

The narrative is exceptionally well-written and demonstrates deep industry expertise. The founder clearly understands the technical and business needs of the target market. The lean, remote-first operating model provides a strong foundation for high profitability.

Risks & Concerns

The financial forecast reveals a significant capacity risk. The business projects revenue to triple in FY27. However, the forecast shows zero expenses for employees or contractors. A single founder cannot realistically triple output without additional support.

Additionally, the cash flow statement shows negative cash balances between February and October 2026. The business must secure initial capital to survive this early deficit. The marketing budget also appears too low to support the aggressive growth targets.

Conclusion

The business plan presents a highly compelling service model with a clear target market. The narrative is professional and persuasive. To reach a fully ready state, the business must align its financial forecast with its operational narrative. Specifically, it needs to account for the labor costs required to support its aggressive revenue growth.

Executive Summary

Strong

A concise overview of your entire business plan that captures your value proposition, target market, competitive advantage, and financial highlights. This is often the first (and sometimes only) section funders read.

What works

****Strong narrative hook.**** The description of the digital plateau is compelling. It clearly defines the market problem.

****Clear value proposition.**** The direct-partnership model is well explained. It positions the business perfectly between freelancers and agencies.

What isn't working

****Missing financial highlights.**** The summary lacks specific revenue projections. Funders need these numbers immediately.

****No funding details.**** The summary does not mention the grant funding request. This omits a critical business goal.

Suggestions

1

Add financial highlights

Include top-line revenue and profit projections. This grounds the summary in financial reality.

Try saying it like this:

The business projects \$25,254 in first-year revenue. This grows to \$173,579 by year three with 90% net margins.

2 Include the funding request

Mention the specific funding goals in the summary. This sets expectations for the rest of the plan.

Try saying it like this:

The business is seeking non-dilutive grant funding. This capital will accelerate the launch of the SiteSignal SaaS product.

3 Clarify the target market

Briefly define the ideal customer profile in the summary. This shows immediate market focus.

Try saying it like this:

The business targets boutique consultancies and B2B technology firms. These clients typically employ 6 to 50 staff members.

Problem & Solution

Strong

An explanation of what problem your business solves and why it matters, followed by how your specific solution addresses that problem. The Problem should focus on market gaps and customer pain points. The Solution should explain your approach, what makes it unique, and how it directly addresses the problems you've identified.

What works

****Excellent problem definition.**** The concept of the Conversion Gap is brilliant. It perfectly articulates the client's pain point.

****Direct solution mapping.**** The three core pillars directly address the identified problems. This creates a highly cohesive narrative.

What isn't working

This section is exceptionally strong. The only minor gap is a lack of quantified data regarding the cost of the problem for clients.

Suggestions

1 Quantify the problem

Add a statistic showing how much revenue firms lose due to poor websites. This increases the urgency of the problem.

Try saying it like this:

Industry studies show that B2B firms lose up to 40% of potential leads due to poor website messaging.

2 Introduce SiteSignal early

Briefly mention the upcoming SiteSignal product in the solution section. This introduces the scalable aspect of the business early.

Try saying it like this:

The business is also developing SiteSignal. This proprietary platform will provide scalable, recurring optimization for clients.

3 Add a brief case study

Provide a brief example of a successful transformation. This proves the solution works in the real world.

Try saying it like this:

For example, a recent audit transformed a static consultancy site into a platform that increased qualified leads by 30%.

Target Market

Strong

A detailed analysis of who your customers are, how large the market is, and why you can capture a meaningful share. Include demographics, psychographics, and market segmentation.

What works

****Highly specific niches.**** Targeting management consultancies and B2B tech firms is smart. It allows for highly tailored messaging.

****Clear pain points.**** The plan perfectly describes the credibility gap. This shows deep empathy for the customer.

What isn't working

****Unsubstantiated market size.**** The plan estimates 500-1,000 qualified prospects. It does not cite a source for this data.

****Vague geographic limits.**** The plan focuses on Sydney and NSW. It does not explain why a remote-first business restricts its geography.

Suggestions

1 Cite market data

Provide a credible source for the market size estimate. This builds trust with funders.

Try saying it like this:

Industry data indicates there are over 800 registered boutique IT consultancies in the New South Wales region.

2 Justify geographic focus

Explain the strategic reason for targeting a specific region despite being a remote business.

Try saying it like this:

While operating remotely, the business targets NSW clients. This allows for strategic in-person meetings to close high-ticket contracts.

3 Add revenue demographics

Include the typical revenue size of the target clients. This proves they can afford premium services.

Try saying it like this:

These target firms typically generate between \$1 million and \$10 million in annual revenue.

Competition

Strong

An honest assessment of direct and indirect competitors, their strengths and weaknesses, and how you differentiate. Funders want to see you understand the competitive landscape.

What works

****Strong alternative analysis.**** The plan clearly outlines the drawbacks of DIY builders and large agencies. This highlights the market gap.

****Clear differentiation.**** The focus on Performance Engineering sets the business apart. This justifies the premium positioning.

What isn't working

****Missing specific competitors.**** The section describes categories of competitors. It fails to name actual competing businesses in Sydney.

****Unclear barrier to entry.**** The plan does not explain what stops other freelancers from adopting the same tech stack.

Suggestions

1 Name direct competitors

Identify specific local agencies or freelancers. This proves the business understands the actual market landscape.

Try saying it like this:

Direct competitors include local boutique agencies like Sydney Digital and generic freelance networks like Upwork.

2 Address price competition

Explain how the business defends against larger agencies lowering their prices. This addresses a key competitive risk.

Try saying it like this:

The lean operating model allows the business to maintain high margins. Larger agencies cannot match this pricing flexibility.

3 Detail technical advantages

Highlight the specific technical advantages over competitors. This reinforces the Performance Engineering value proposition.

Try saying it like this:

Unlike competitors using bloated WordPress templates, the business utilizes React and Next.js. This ensures superior load times.

Business Model

Strong

How your company makes money. Include revenue streams, pricing strategy, unit economics, and customer acquisition costs.

What works

****Clear revenue streams.**** The transition from project fees to recurring retainers is a proven, stable model.

****SaaS integration.**** The planned launch of SiteSignal provides a highly scalable revenue channel.

What isn't working

****Missing pricing details.**** The narrative mentions tiered engagements. It does not provide the actual dollar amounts for these tiers.

****Unclear acquisition costs.**** The plan does not estimate how much it costs to acquire a new client.

Suggestions

1 Detail pricing tiers

Provide specific price points for the services. This helps funders understand the unit economics.

Try saying it like this:

Custom website overhauls start at \$5,500. Ongoing optimization retainers average \$850 per month.

2 Estimate acquisition costs

Add a metric for customer acquisition cost. This proves the marketing strategy is financially viable.

Try saying it like this:

The business targets a Customer Acquisition Cost (CAC) of under \$500. This is achieved through high-conversion digital audits.

3 Explain SiteSignal pricing

Outline the basic pricing strategy for the upcoming SaaS product.

Try saying it like this:

SiteSignal will operate on a tiered subscription model. Pricing ranges from \$99 to \$299 per month based on usage.

Marketing Strategy

Developing

Your go-to-market plan including positioning, channels, customer acquisition strategy, and sales process.

What works

****Consultative sales approach.**** Using digital audits as a lead magnet is highly effective for B2B services.

****Clear positioning.**** The messaging sharply contrasts the business against both cheap DIY tools and expensive agencies.

What isn't working

****Financial disconnect.**** The forecast shows only \$1,000 for marketing in FY26. This budget contradicts the aggressive outreach and partnership strategy.

****Vague partnership incentives.**** The plan mentions referral networks. It does not explain how these partners are incentivized to refer clients.

Suggestions

1 Align marketing budget

Ensure the narrative matches the financial forecast. If the strategy requires more capital, update the forecast.

Try saying it like this:

The business allocates \$2,400 annually for premium LinkedIn tools and targeted networking events.

2 Define referral incentives

Explain the financial mechanics of the referral network. Partners need a reason to send leads.

Try saying it like this:

Strategic partners receive a 10% referral fee for every signed contract. This incentivizes consistent lead generation.

3 Quantify outreach goals

Add specific targets for the digital audit strategy. This shows a clear understanding of sales funnels.

Try saying it like this:

The business aims to conduct ten digital audits per month. This volume is expected to yield two new clients.

Operations

Strong

How your business actually runs day-to-day. Include facilities, technology, key processes, and partnerships.

What works

****Clear technology stack.**** The plan details specific development frameworks. This demonstrates strong technical competence.

****Lean operations.**** The remote-first model keeps overhead low. This aligns perfectly with the high gross margins.

What isn't working

****Vague milestones.**** The milestones lack specific financial targets. This makes tracking progress difficult.

****Missing software costs.**** The narrative lists multiple premium tools. The forecast only allocates \$2,901 for software in FY26. This budget appears too low.

Suggestions

1 Quantify operational milestones

Add specific revenue or client acquisition targets to the milestones table. This provides clear operational goals.

Try saying it like this:

Secure three additional paying clients by December 31, 2026, generating \$15,000 in new project revenue.

2 Align software budget

Review the software expense line item. Ensure it covers all mentioned tools like HubSpot and BugHerd.

Try saying it like this:

The business allocates \$4,500 annually for premium operational software. This includes HubSpot CRM, BugHerd, and Figma licenses.

3 Specify cash reserve target

Define the specific cash reserve target mentioned in the metrics section. This shows strong financial discipline.

Try saying it like this:

The business maintains a minimum cash reserve of \$15,000. This funds incremental hardware upgrades and operational contingencies.

Team

Developing

The people who will execute this plan. Include founders, key hires, advisors, and any relevant experience or track record.

What works

****Strong founder profile.**** The description of Jessica Manning highlights relevant strategic and technical skills.

****Appropriate legal structure.**** The sole proprietorship model makes sense for the current lean startup phase.

What isn't working

****Missing capacity planning.**** The narrative mentions scaling the team. The financial forecast shows zero payroll or contractor costs.

****Unnamed advisors.**** The plan mentions a network of mentors and consultants. It does not name any specific individuals or firms.

Suggestions

1 Align hiring with financials

Explain how the business will handle increased workload. Ensure this matches a contractor line item in the forecast.

Try saying it like this:

The business will engage specialized freelance developers as project volume increases. This variable cost model protects profit margins.

2 Name key advisors

List specific names and credentials for the advisory network. This builds immediate credibility.

Try saying it like this:

The advisory board includes John Smith, a senior technical architect, and Jane Doe, a B2B marketing specialist.

3 Detail founder track record

Add specific metrics regarding the founder's past success. Funders invest in proven track records.

Try saying it like this:

Jessica Manning brings ten years of experience in enterprise web development. She has successfully delivered over fifty high-performance digital projects.

Financial Projections

Developing

Your financial forecasts including revenue projections, expenses, profitability timeline, and key assumptions.

What works

****Detailed revenue streams.**** The forecast breaks down projects, retainers, and SiteSignal. This matches the business model perfectly.

****High gross margins.**** The 95-99% margins accurately reflect a service-based digital business. This shows strong unit economics.

What isn't working

****Negative cash flow.**** The cash balance drops below zero from February to October 2026. This indicates a severe liquidity risk.

****Unrealistic capacity.**** Revenue grows from \$25k to \$173k. The forecast shows zero payroll or contractor expenses to support this work.

****Missing grant funding.**** The narrative mentions seeking grants. The cash flow statement shows no incoming financing.

Suggestions

1 Add contractor expenses

Include a direct cost or operating expense for contractors. This justifies the ability to triple revenue.

Try saying it like this:

The business allocates 20% of project revenue to specialized freelance developers. This ensures scalable delivery capacity.

2 Address the cash deficit

Add initial funding to the cash flow statement. This resolves the negative cash balances in 2026.

Try saying it like this:

An initial founder investment of \$5,000 provides working capital. This prevents cash flow shortages during the startup phase.

3 Explain SiteSignal growth

Provide a brief narrative explaining the massive jump in SiteSignal revenue in FY28.

Try saying it like this:

SiteSignal revenue scales rapidly in 2028. This growth is driven by converting existing service clients to the SaaS platform.

Funding Request

Developing

How much capital you need, how you'll use it, expected return for funders, and your exit strategy.

What works

****Clear funding purpose.**** The plan explicitly ties funding to SiteSignal commercialization. This shows strategic foresight.

****Bootstrapped foundation.**** The reliance on early client revenue demonstrates market traction. This reduces risk for potential grant providers.

What isn't working

****Missing funding amounts.**** The narrative mentions seeking grant funding. It never specifies the amount needed.

****Forecast disconnect.**** The financial statements show no incoming grant capital. This contradicts the funding request narrative.

Suggestions

1 Specify the grant amount

State the exact amount of grant funding required. Funders need to know the specific request.

Try saying it like this:

The business seeks a \$25,000 non-dilutive grant. This capital will fund the commercialization of the SiteSignal platform.

2 Address the cash deficit

Explain how the business will survive the negative cash flow projected in early 2026.

Try saying it like this:

The founder will inject \$5,000 in initial capital. This covers the projected cash flow deficit in early 2026.

3 Align funding with forecast

Update the financial forecast to include the anticipated grant funding. This ensures the narrative matches the numbers.

Try saying it like this:

The business will secure grant funding in late 2026. This aligns with the planned SiteSignal launch in 2027.

Funder Q&A Prep

Challenging questions funders will ask about your plan. Use the pro-tips to prepare strong, confident answers.

- 1 Your revenue projections show growth from \$25k to \$173k in three years, but your forecast shows zero expenses for employees or contractors. How will one person deliver this volume of work?

Pro-Tip: Acknowledge the capacity limit. Explain at what revenue threshold you will hire contractors, and update your forecast to reflect those costs.

- 2 Your cash flow statement shows negative cash balances between February and October 2026. How will the business survive this period?

Pro-Tip: Be prepared to discuss initial founder capital or early client deposits. Update the cash flow statement to show this initial funding.

- 3** You outline an aggressive direct outreach and partnership strategy, but your marketing budget is only \$1,000 for the first year. How will you fund customer acquisition?

Pro-Tip: Explain that outreach is primarily time-intensive rather than capital-intensive. However, consider increasing the software/marketing budget to cover premium LinkedIn tools or CRM costs.

- 4** The plan mentions seeking non-dilutive grant funding for SiteSignal, but this isn't reflected in your financial statements. How much do you need, and what happens if you don't get it?

Pro-Tip: Specify the exact grant amount needed. Have a backup plan ready, such as funding development entirely through service revenue at a slower pace.

- 5** SiteSignal subscriptions jump to nearly \$50k in FY28. What is the specific go-to-market strategy for this product?

Pro-Tip: Explain how you will leverage your existing service clients as beta testers. Detail the transition from a service-led sale to a product-led sale.

- 6** Why restrict your target market to Sydney and NSW if you operate a remote-first digital business?

Pro-Tip: Frame this as a strategic advantage. Explain that local proximity allows for high-touch, in-person closing for premium contracts, which builds faster trust.
